# Knipsa

## Single use Biopsy Forceps

The Biopsy Forceps Knipsa from JOLINE is the result of a long and intensive cooperation between the University Lund/Schweden and our R&D department. All JOLINE products are CE marked and designed by specialists who demand the highest quality. All this takes place in our state of the art hightech production facility.

## Further advantages

### Fits like a glove.

The ergonomic handle makes sure for a perfect finger positioning and allows simple and safe usability and operation of the forceps. Easy to steer.

### Larger forceps (Jaw) & Sharp teeth.

The large forceps opening eases tangential Biopsies. No pulling / tugging on heart. Sharp teeth allow atraumatic tissue removal.

### Excellent maneuverability.

The customized shaft supports a safe and easy navigation. The FEP-cover ensures the maneuverability.

### Minimal Invasive.

Due to the slim design a 6Fr sheath can be used rather than the traditional 8Fr sheath. Reduces scar tissue and increasing the aesthetic aspect for the patient.

## Order information/Specifications:

Art.No.	Length (mm)	Jaw OD	Recommended sheath size	Packaging
